Carrollton, Texas 75006-7315

---

Dear Mr. Mayfield:

On August 28, 2006, your company, Mayfield Thermography Consulting Services, Inc., provided a Qualitative Aerial Infrared Thermographic Survey for moisture intrusion of the roof surfaces of our client, the U.S. Bureau of Engraving and Printing, in North Tarrant County, Texas.

We appreciate the professionalism you provided during the project scope of work and our client has found the information to be very helpful in their ongoing facilities maintenance program. Because of the very technical nature of the analysis protocol, we recognize the value this report provides, which results could not have been achieved by the customary visual process.

We will retain this information for comparative purposes with future reports as we understand the physical conditions of our client's facilities can change, especially as surface conditions and weather conditions may alter or affect the structural integrity of their buildings.

On behalf of our client, the U.S. Bureau of Engraving and Printing, thank you, again, for this excellent report and the professional manner in which it was conducted and delivered to our organization.

Sincerely,  
F.W. Kessler & Associates, Inc.

Frank W. Kessler, AIA LEED  
President
